

Press release No.: 1187 - en // CONTROLsuite // 09 April 2020

BTG launches CONTROLsuite, its intuitive, user-friendly and comprehensive solution to optimize loop performance

While plants invest significantly in sensors, actuators, control systems, and advanced process control solutions, it is key that the return on these investments is sustained. Today, one third of the process controllers installed operate in manual mode, and on average, one third of the loops in a given facility have equipment problems.

With CONTROLsuite, optimum performance is achievable. Using CONTROLsuite in a facility will lead to improvement in overall productivity (typically 4 to 8%), in energy consumption (on average 1 to 2%), and in quality of the final product.

CONTROLsuite provides a complete overview of loop performance throughout the entire facility. It identifies and prioritizes the loops that are not performing satisfactorily and identifies the root causes of loop issues. A toolbox for loop tuning is also available.
